                                                                                                                 consistion of the respectation, or reverse transcription of RNA by retroviruses. The compositions are therefore particularly used to inhibit retroviral replication. The oligoarabinonucleotides can also be used, in combination with RNAsse H, as reagents for sequence-specific cleavage or RNA mapping, and additionally for the study and control of gene expression in cells. The oligoarabinonucleotides have excellent affinity for RNA, increased resistance to nucleases and show little if any non-specific binding to cellular or serum proteins. They target ss RNA, but not complementary ss DNA, so may be useful for targetting retroviral genomic RNA to inhibit the early stages of viral replication. Oligoarabinonucleotides containing pyrimidine bases form triple helices with significantly higher thermal stability than those produced by normal coligoacexyarabinonucleotides containing 2'-deoxy-2'fluoro-beta-D-carabinose used in an exemplification of the present invention

                                                                                                                                                                                                                                                                                                                                                                                          specific inhibition of gene transcription and expression in a host. The composition comprises oligonucleotides containing arabinose sugars that can hybridise to either a a single-stranded (ss) NNA to induce RNase H cleavage activity, or to a DNA/DNA or DNA/RNA duplex to form a triple helix, thereby inhibiting DNA replication and/or transcription. The oligoarabinonucleotides are used for antisense inhibition of gene

                                                 CC composition comprises oligonucleotides containing arabinose sugars that CC can hybridise to either a single-stranded (ss) RNA to induce RNAse H CC cleavage activity, or to a DNA/DNA or DNA/RNA duplex to form a triple cell to the composition of the composition and/or transcription. The CC expression or to prevent DNA replication and/or transcription of gene conjugarabinonucleotides are used for antisense inhibition of gene conjugarabinonucleotides compositions are therefore particularly used to inhibit retroviruses. The compositions are therefore particularly used to composition with RNAse H, as reagents for sequence-specific cused, in combination with RNAse H, as reagents for sequence-specific cused, in combination with RNAse H, as reagents for sequence-specific cused, in combination with RNAse H, as reagents for sequence-specific cused, in combination additionally for the study and control of gene expression in cells. The oligoarabinonucleotides have excellent caffinity for RNA, increased resistance to nucleases and show little if caffinity for RNA, increased resistance to nucleases and show little if can non-specific binding to cellular or serum proteins. They target ss cult not complementary ss DNA, so may be useful for targetting retroviral genomic RNA to inhibit the early stages of viral replication. Oligoarabinonucleotides containing pyrimidine bases form triple helices with significantly higher thermal stability than those produced by normal coligonoucleotides. Sequences AAZ87165-Z87169 represent oligonoucleotides.
                                  oligodeoxyarabinonucleotides containing 2'-carabinose used in an exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                   specific inhibition of gene transcription and expression in a host.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Therapeutic composition containing antisense oligonucleotides that include arabinose sugars, particularly for inhibiting viral replications.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 transcription; expression; reverse transcription; viral replication; RNase H cleavage; triple helix formation; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        08-MAY-2000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAZ87167 standard; DNA; 18
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Example 2; Page 31; 91pp; English

Two series of antisense oligonucleotides were synthesised. The first series comprised 8-30 oligodeoxynucleotides with a phosphorothicate backbone. The second series comprised chimeric oligonucleotides composed of a central gap region, consisting of ten 2'-deoxynucleotides which was flanked on both sides by four-nucleotide wings. The wings were composed of 2'-methoxyethyl (2'-MOE) nucleotides. Both series contained the same nucleotide sequences. The antisense compounds are useful for research, diagnosis, treatment and prophylaxis to prevent or delay infection, inflammation or tumour formation. Therapeutically the oligonucleotides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Antisense compounds targeted to steroid receptor RNA activator useful for diagnosis, prophylaxis and treatment of diseases associated with the steroid activator, such as infection, inflammation or tumor formation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The patent discloses novel secreted factor protein encoded by clone P00188 D12. The secreted factor is differentially expressed in certain disease states. Secreted protein, its antibodies, antagonists or compositions comprising them are useful in the diagnosis and treatment cardiac diseases such as congestive heart failure, myocarditis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel secreted factor encoded by clone P00188D12 which is differentially expressed in certain disease states, useful in diagnosing and treating cardiac, renal or inflammatory diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       antiarrhythmic; antiarteriosclerotic; antiatherosclerotic; nephropathi antidiabetic; immunosuppressive; antiasthmatic; antirheumatoid; antibacterial; osteopathic; cerebroprotective; vasotropic; antiulcer; nootropic; neuroprotective; congestive heart failure; myocarditis;

The antibody mimics is useful for detecting a compound preferably a protein, in a biological sample. It is also useful to detect one or more different analytes simultaneously in a sample. Hence is useful for diagnostic purposes. It is also useful for the purpose of designing proteins capable of binding to virtually any compound of interest. The present sequence is an oligonucleotide Al8-2PEG linker used in an exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Fibronectin scaffold protein array for obtaining a protein/compound which binds to a compound/protein, comprises a fibronectin type III domain having a randomized loop, a randomized beta-sheet or their combination.
                         Immunostimulatory nucleic acid #824.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to a method for stimulating an immune response. The method comprises administering an immunostimulatory nucleic acid to a non-rodent subject in sufficient quantity to stimulate an immune response. The present sequence is one such immunostimulatory nucleic acid. The immunostimulatory nucleic acids can be pyrimidine rin (py-rich) or thymidine (T) rich The method is used to vaccinate subjects against tumour antigens, viral antigens (e.g. herpesviridae, retroviridae and/or orthomyxoviridae), bacterial antigens (e.g. toxoplasma, haemophilus, campylobacter, clostridium, Escherichia coli and/or staphylococcus), fungal antigens and/or parasitic antigens. The method is also useful for preventing cancer, asthma, infectious disease, allergy or immune deficiency. The present sequence can also be used to redirect a Th2 to a Th1 immune response and to activate immune cells. Note: the present sequence may have a phosphorothioate backbone

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                immune deficiency. The present sequence can also be used to redirect Th2 to a Th1 immune response and to activate immune cells. Note: the present sequence may have a phosphorothicate backbone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            response. The method comprises administering an immunostimulatory nucleic acid to a non-rodent subject in sufficient quantity to stimulate an immune response. The present sequence is one such immunostimulatory nucleic acid. The immunostimulatory nucleic acids can be pyrimidine rich (py-rich) or thymidine (T) rich. The method is used to vaccinate subjects against tumour antigens, viral antigens (e.g. herpesviridae, retroviridae and/or orthomyxoviridae), becterialiantigens (e.g. toxoplasma, haemophilus, campylobacter, clostridium, Escherichia coli and/or staphylococcus), fungal antigens and/or parasitic antigens. The method is slaso useful for preventing cancer, asthma, infectious disease, allergy or the mother of the staphylococcus of the 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Vaccinating against tumors, infectious diseases, allergies and asthma using immunostimulatory Py-rich and TG nucleic acids.
  Stanton LW,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Phagemid vector pCR2.1 polylinker oligonucleotide #6.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        29-JUN-2001 (first entry)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AAF82472;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC The present sequence corresponds to polylinker DNA of the phagemid vector CC pCR2.1. It was used in the construction of a normalised rat cDNA library, CC which was used in an example demonstrating differential expression of a CC rat gene referred to as clone p00210099. The invention relates to a CC polypeptide comprising a sequence of at least 80% identity to residues 22 CC 122 of the present sequence, or a sequence encoded by a nucleic acid CC hybridising under stringent conditions to the complement of the coding CC region comprising 1031 nucleotides, and having at least one biological CC activity of the polypeptide encoded by clone P0021009. The polypeptides are considered by clone p0021009. The polypeptides CC and polynucleotides of the invention are useful for the treatment of CC cardiac, renal and inflammatory diseases. The polynucleotides are useful in antisense mediated gene inhibition and in gene therapy. The CC polypeptides are useful in assays for identifying lead compounds that may be used as therapeutic agents in the treatment of cardiac, kidney or inflammatory diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

The invention relates to rat secreted factor polypeptides and the polynucleotides encoding them. The sequences are useful for treating cardiac, renal or inflammatory diseases. These include cardiac disease such as congestive heart failure, myocarditis, dilated congestive cardiomyopathy, angina pectoris, myocarditi infarction, cardiac arrhythmia, pulmonary hypertension, arteriosclerosis, atherosclerosis cardiac tumours, renal diseases such as glomerulonephritis, nephrotic syndrome, renal infarction, hereditary nephritis, polycystic kidney disease, chronic renal failure, renal vein thrombosis and medullary sponge kidney and inflammatory diseases such as asthma, rheumatoid

The probes hybridise to the 16S rRNA gene, and have a marker attached to then. The probes are able to hybridize with mRNA of one species of genus Encephalitozoon without reactivity with other microorganisms. The probes are useful for detecting the presence of Encephalitozoon microorganisms, especially Encephalitozoon hellem, Encephalitozoon cuniculi and
                                                                                                                                                                                                                                                                                                                                                                   Example 1; Page 51; 189pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                             Novel secreted factor polypeptide useful for treating cardiac diseases such as arteriosclerosis, myocardial infarction, inflammatory diseases such as asthma, stroke, and rheumatoid arthritis and renal diseases.

                                                                                  The invention relates to inhibiting angiogenesis in a subject, comprising administering at least one antiangiogenic nucleic acid molecule. Also included is a kit comprising a first container housing the antiangiogenic nucleic acids, and instructions for administering them to a subject having a condition characterised by unwanted angiogenesis. The method is useful for inhibiting angiogenesis associated with solid tumour growth, tumour metastasis, precancerous lesion, rheumatoid arthritis, psoriasis, diabetic retinopathy, retinopathy of prematurity, macular degeneration, corneal graft rejection, neovascular glaucoma, retrolental fibroplasia, rubeossis, Osler-Webber Syndrome, myocardial angiogenesis, plaque neovascularisation, telangiectasia, haemophiliac joints, angiofibroma, wound granulation, intestinal adhesions, atherosclerosis, scleroderma and hypertrophic scare. The present sequence is an antiangiogenic nucleic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             tumour metastasis; precancerous lesion; rheumatoid arthritis; psoriasis; diabetic retinopathy; retinopathy of prematurity; macular degeneration; corneal graft rejection; neovascular glaucoma; retrolental fibroplasia; rubeosis; Osler-Webber Syndrome; myocardial angiogenesis; plaque neovascularisation; telangiectasia; haemophiliac joint; angiofibroma, wound granulation; intestinal adhesion; atheroscierosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          host reaction, Crohn's disease, ulcerative colitis and Alzheimer's disease. Sequences AAS94693-AAS94745 represent cDNA clones, which encode the secreted factor polypeptides of the invention, and oligonucleotide

                                                                                                                                                                                                                                                                                     The invention relates to inhibiting angiogenesis in a subject, comprising administering at least one antiangiogenic nucleic acid molecule. Also included is a kit comprising a first container housing the antiangiogenic nucleic acids, and instructions for administering them to a subject having a condition characterised by unwanted angiogenesis. The method is useful for inhibiting angiogenesis associated with solid tumour growth, tumour metastasis, precancerous lesion, rheumatoid arthrittis, psoriasis, diabetic retinopathy, retinopathy of prematurity, macular degeneration, corneal graft rejection, neovascular glaucoma, retrolental fibroplasia, rubeossis, Osler-Webber Syndrome, myocardial angiogenesis, plaque neovascularisation, telanglectasia, haemophiliac joints, angiofibroma, wound granulation, intestinal adhesions, atherosclerosis, scleroderma and hypertrophic scare. The present sequence is an antiangiogenic nucleic acid of the inventor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Angiogenesis inhibitor; ss; angiogenesis; solid tumour growth; tumour metastasis; precancerous lesion; rheumatoid arthritis; psoriasis; diabetic retinopathy; retinopathy of prematurity; macular degeneration; corneal graft rejection; neovascular glaucoma; retrolental fibroplasia; rubeosis; Osler-Webber Syndrome; myocardial angiogenesis; plaque neovascularisation; telangiectasia; haemophiliac joint; angiofibroma; wound granulation; intestinal adhesion; atheroscierosis;
                                                                                                                                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Inhibiting angiogenesis in a subject, involves administering at least one antiangiogenic nucleic acid molecule to the subject.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         WPI; 2002-566690/60
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      14-DEC-2000; 2000US-025534P.

                                                                                                                                  The present invention relates to methods for treating or preventing cancer, involving administering to a subject having or at risk of developing cancer immunostimulatory nucleic acids that induce expression of cell surface antigens and antibodies. The methods are useful for treating or preventing cancer such as basal cell carcinoma, bladder cancer, bone cancer, brain and central nervous system (CNS) cancer, breast cancer, cervical cancer, colon and rectum cancer, connective tissue cancer, oseophageal cancer, eye cancer, kidney cancer, larynx cancer, leukaemia, liver cancer, lung cancer, Hodgkin's lymphoma, melanoma, myeloma, oral cavity cancer, ovarian cancer, stomach cancer, testicular cancer, and uterine cancer. The present sequence is an immunostimulatory oligonucleotide described in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                      Treating or preventing cancer, such as basal cell carcinoma, comprises administering immunostimulatory nucleic acids that induce expression of cell surface antigens and antibodies to a subject having or at risk of cell surface
                                                                                                                                                                                                                                                                                                                                                                                                                                                  WPI;

                                                                                                                                                                                    The present invention relates to novel polypeptides having cytotoxic contivity obtainable from sea hare Aplysia. Sequences of the invention are cuseful for the manufacture of cytotoxic agents against apoptosis consistent cells, where the agents are useful for diagnosis, prevention, treatment of disorders associated with dysfunctions of GAP-SH3 binding contein, factors for generating or detoxifying reactive oxygen species convertion, and factors for blocking and/or by-passing of caspases. They are consecuted in the invention are useful for destroying tumours and/or selectively killing cells in tissues, for destroying tumours and/or selectively killing cells in tissues, for contestiving novel trargets for the development of pharmaceutical agents, preferably anti-tumour agents and as specific ion channel modulators, consistent for the diagnostic or research. They are consecuted for the diagnosis and therapy, diagnostic or research. They are consecutive diseases such as Alzheimer's disease, Parkinson's disease, arteriosclerosis, heart diseases, stroke and vascular diseases. The present sequence is an oligonucleotide which is used for amplifying sea invention.

In the method an RNA molecule is obtained and a first CC primer is added that comprises a region that hybridises to a CC complementary region of the molecule before a second primer is added CC complementary region of the molecule is synthesised, the primer. A first CC complementary nucleic acid molecule is synthesised, the RNA molecule and CC second primer are removed and a second complementary nucleic acid CC molecule is synthesised to form a second hybrid with an extension product CC of the third primer bound to the first complementary molecule. The method CC of the invention is useful for increasing the efficiency of second strand CC cDNA synthesis and may be used for linear amplification of genetic CC signals from histologically stained tissue. The present sequence CC represents a poly d(T) PCR primer used in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        र्
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Best
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    to amplify said adaptor-added CDNAs containing no region derived from polyadenylic acid of the mRNA before the adaption of the adaptor among the adaptor-added cDNAs prepared by the step (b); (e) the ratios of the cDNA amounts are measured between the tissues; (f) the RNA is detected from the measured result; (g) each different adaptor and acommon adaptor are added to each of the genomic DNA fragments derived from a same or different individuals; (h) the resultant adaptor-added genomic DNAs are mixed together; (i) the adaptor-added genomic DNAs are amplified by using an adaptor primer having the common sequence to the different adaptor and a sequence-specific adaptor; and (j) the ratios of the amplified amounts of the genomic DNAs are measured between the individuals. The method is sequence represents an oligonucleotide which is used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes a method for the comparative detection of the amount of an RNA. The method comprises: (a) cDNAs obtained by transcribing respectively from at least two tissue RNAs are respectively fragmented by using a same restriction enzyme; (b) each different adaptor and a common adaptor are added to each of the cDNA fragments derived from the same or different tissues by the step (a); (c) the resultant adaptor added cDNAs are mixed together; (d) an adaptor primer having the common sequence to said different adaptor and a gene-specific adaptor are used together the common adaptor and a gene-specific adaptor are used to amount of the common adaptor and a gene-specific adaptor are used to amount of the common adaptor and a general the common adaptor are used to amount of the common adaptor and a general the common adaptor are used to amount of the common adaptor and a general the

They are useful for selectively preventing gene expression in a sequence-specific manner, for hybridising to complementary RNA such as cellular mRNA or viral RNA, to hybridise to and induce cleavage of complementary RNA. They are also useful therapeutically in formulations or medicaments to prevent or treat a disease characterised by the expression of a particular target RNA. The invention is used in gene therapy. The present sequence is a target RNA, used in the exemplification of the invention
                                                               Novel acyclic linker-containing oligonucleotide useful for preventing or decreasing translation, reverse transcription and/or replication of a target RNA in a system, comprises a modified deoxyribonucleotide.
                                                                                                                                                                                                                             29-OCT-2001; 2001US-0330719P

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     the invention are useful for preventing or decreasing translation, reverse transcription and/or replication of a target RNA in a system. They are useful for selectively preventing gene expression in a sequence-specific manner, for hybridising to complementary RNA such as cellular mRNA or viral RNA, to hybridise to and induce cleavage of complementary RNA. They are also useful therapeutically in formulations or medicaments to prevent or treat a disease characterised by the expression of a particular target RNA. The invention is used in gene therapy. The present sequence is an antisense oligo used to elicit human RNase (ribonuclease) H degradation of target RNA. This sequence is used in the exemplification
The invention relates to an acyclic linker-containing oligonucleotide comprising at least one modified deoxyribonucleotide. Oligonucleotides of the invention are useful for preventing or decreasing translation, reverse transcription and/or replication of a target RNA in a system. They are useful for selectively preventing gene expression in a sequence-specific manner, for hybridising to complementary RNA such as cellular mRNA or viral RNA, to hybridise to and induce cleavage of complementary RNA. They are also useful therapeutically in formulations or medicaments

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to an oligonucleotide primer capable of specifically hybridising to a DNA having the sequence of the flanking regions of a microsatellite selected from M2-4-9, M2-2-12, M2-3-11, M2-2-20, M2-2-21, M2-2-22, M2-2-23, M2-2-24, M2-4-25, M2-4-26, M2-2-29, M2-2-32, M2-4-37, M2-4-37, M2-3-3-22, M2-2-36, M2-5-11, M2-2-29, M2-2-36, M2-5-11, M2-2-46, and M2-2-48. The primer is useful for determining the number of repeat units of the microsatellite cited above. The primer is useful in HLA-related research, such as genetic mapping of HLA class II-associated diseases, transplantation matching, population genetics, and identification of recombination hot spots as well as linkage disegnilibrium studies. The present sequence represents the human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New oligonucleotide primer capable of specifically hybridizing to a DNA having the sequence of the flanking regions of a microsatellite (e.g. M249), useful for HLA-related research, e.g. transplantation matching.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               RESULT 474
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to a new oligonucleoside which comprises at CC alternating first and second segments. The first segment comprises at CC least one sugar modified nucleoside. The second segment comprises at CC least one 2'-deoxynucleoside. The oligonucleoside comprises at least 2 of CC each of the first and second segments, so that it comprises at least 4 of CC composition for inducing RNAse H-mediated cleavage of a target RNA in a System, preventing or decreasing translation, transcription or CC replication of a target RNA in a system, validating a gene target corresponding to a CC target RNA in a system or preventing or treating a disease related to a CC target RNA in a system or preventing or treating a disease related to a CC target RNA in a system or preventing or treating a disease related to a CC target RNA in a system or preventing or treating a disease related to a CC target RNA in a system or preventing or treating a disease related to a CC target RNA in a system or preventing or treating a disease related to a CC target RNA in a system or preventing a gene therapy. The present CC sequence is an antisense oligonucleotide used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               alternating first and second segments. The first segment comprises at least one sugar modified nucleoside. The second segment comprises at least one 2'-deoxynucleoside. The oligonucleoside comprises at least 2 oleach of the first and second segments, so that it comprises at least 4 alternating segments. The oligonucleotide is useful for preparing a composition for inducing RNase H-mediated cleavage of a target RNA in a system, preventing or decreasing translation, transcription or replication of a target RNA in a system, validating a gene target corresponding to a target RNA in a system or preventing or treating a disease related to a target RNA in a system or preventing or treating a disease related to a target RNA in a system or preventing or treating a disease related to a target RNA in a system or preventing or treating a disease related to a target RNA in a system or preventing or treating a disease related to a target RNA in a system or preventing or treating a disease related to a target RNA in a system or preventing or treating a disease related to a target RNA in a system or preventing or treating a disease related to a target RNA in a system or preventing or treating a disease related to a target RNA in a system or preventing or treating a disease related to a target RNA in a system or preventing or treating a disease related to a target RNA in a system or preventing or treating a disease related to a target RNA in a system or preventing or treating a disease related to a target RNA in a system or preventing or treating a disease related to a target RNA in a system or preventing or treating a disease related to a target RNA in a system or preventing or treating a disease related to a target RNA in a system or preventing or treating a disease related to a target RNA in a system or preventing or treating a disease related to a target RNA in a system or preventing the present system or preventing the preventing the preventing the preventing the present system of the preventing the preventing the preventi

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CC The present invention relates to a new oligonucleoside which comprises CC alternating first and second segments. The first segment comprises at CC least one sugar modified nucleoside. The second segment comprises at CC least one 2'-deoxynucleoside. The oligonucleoside comprises at least 2 of CC each of the first and second segments, so that it comprises at least 4 CC alternating segments. The oligonucleotide comprises at least 4 CC alternating segments. The oligonucleotide is useful for preparing a CC composition for inducing RNase H-mediated cleavage of a target RNA in a CC creplication of a target RNA in a system, transcription or CC replication of a target RNA in a system, validating a gene target corresponding to a target RNA in a system, validating a gene target corresponding to a target RNA in a system, e.g., acquired immune deficiency syndrome (AIDS) CC or hepatitis B. The invention is useful in gene therapy. The present CC sequence is an antisense DNA-RNA hybrid used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          SXCCCCCCCCCCCCCXXXXTTTTT

The present invention relates to a new oligonucleoside which comprises at least girst and second segments. The first segment comprises at least one sugar modified nucleoside. The second segment comprises at least one 2'-deoxynucleoside. The oligonucleoside comprises at least 2 of each of the first and second segments, so that it comprises at least 4 calternating segments. The oligonucleotide is useful for preparing a composition for inducing RNase H-mediated cleavage of a target RNA in a system, preventing or decreasing translation, transcription or replication of a target RNA in a system, validating a gene target corresponding to a target RNA in a system or preventing or treating a disease related to a target RNA in a system, e.g., acquired immune deficiency syndrome (AIDS) or hepatities B. The invention is useful in gene therapy. The present sequence is an antisense DNA-RNA hybrid used in the exemplification of

                                                                                                                      CC The present invention relates to a new oligonucleoside which comprises at CC eleast one sugar modified nucleoside. The first segment comprises at CC least one 2'-deoxynucleoside. The oligonucleoside comprises at least 2 of CC each of the first and second segments, so that it comprises at least 2 of CC eleast in segments. The oligonucleotide is useful for preparing a CC composition for inducing RNAse H-mediated cleavage of a target RNA in a System, preventing or decreasing translation, transcription or CC replication of a target RNA in a system, validating a gene target comparing to a CC target RNA in a system, validating a gene target corresponding to a CC target RNA in a system or preventing or treating a disease related to a CC target RNA in a system, e.g., acquired immune deficiency syndrome (AIDS) CC or hepatitis B. The invention is useful in gene therapy. The present CC sequence is a target RNA used in RNAse H assay. This sequence is used in CC the exemplification of the invention

The methods and compositions of the present invention are useful for diagnosing and/or treating asthma and allergy especially in a hypo-responsive subject. The present sequence represent an immunostimulatory nucleic acid of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Treating and/or preventing allergy or asthma using an immunostimulatory nucleic acid alone or in combination with an asthma/allergy medicament.

The methods an subject soft the present invention are useful for diagnosing and/or treating asthma and allergy especially in a hypo-responsive subject. The present sequence represents an immunostimulatory nucleic acid of the invention.
                                                                                                                              Concurrent interrogation of a number of polymorphic sites, useful for genetic testing, carrier screening, genetic profiling, and identity testing, comprises conducting a multiplexed elongation assay using
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    probe; ss; negative control; CFTR; human leukocyte antigen; HLA;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                interference from, non-designated polymorphic sites. Specifically, it comprises conducting a multiplaxed elongation assay by applying one or more temperature cycles to achieve linear amplification of the target or a combination of annealing and elongation steps under temperature-cycle controlled conditions. Furthermore, this detection method uses probe extension or elongation and relies on enzymatic recognition, a superior technique that no longer depends on differential hybridisation. The cyresent invention describes probes and methods useful for identifying or detecting polymorphisms at one or more designated sites, such that they can identify mutations within the cystic fibrosis conductance transmembrane regulator (CTR) or the human leukocyte antigen (HLA) genety in addition, concurrent interrogation of a multiplicity of conjugorable sites is useful for genetic testing, carrier screening, genotyping or genetic profiling, and identity testing. This conductation is the negative control probe used for the elongation of the elongation of the conductation of the analysis of HLA-DR, in an exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

                                                       The invention relates to amplifying for RNA in a sample comprises eliminating single-stranded oligonucleotide from the transcription sample. The method involves synthesizing single-stranded cDNA by incubating the sample RNA with reverse transcriptase and an oligonucleotide primer that primes synthesis in a direction toward 5' end of the RNA; converting the single-stranded cDNA into double-stranded cDNA of the RNA;
  to form a transcription sample containing a cDNA template; eliminating single-stranded oligonucleotide from the transcription sample; and transcribing the cDNA template into RNA using an RNA polymerase. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Synthetic

ន្តស្ត្រន្តន្ត្
CC comprising a reaction domain and a detection domain, introducing into the Cc chamber a fluid that is interactive with the reaction domains, removing CC the fluid from the chamber, determining by means of the detection domains. CC the locations at which the fluid has not interacted with the reaction domains and relating the locations to the functional property of the CC fluid. The reaction domains involves nucleotides. The detection domain comprises a member of a specific binding pair. The determining of the CC domains that have interacted with the fluid. The functional property is CC chosen from the flow pattern of the fluid. The functional property is CC useful for determining a functional property of a fluid in a chamber and CC useful for determining a functional property of a fluid in a chamber and CC useful for determining a functional property of a fluid in a chamber and CC useful for determining a functional property of a fluid in a chamber and CC useful for determining a functional property of a fluid in a chamber and CC useful for determining a functional property of a fluid in a chamber and CC useful for determining a functional property of a fluid in a chamber and CC useful for determining a functional property of a fluid in a chamber and CC useful for determining a function of a new fluid in a known CC flow cell, a known fluid in a new flow cell or a new fluid/flow cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 닭
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

                                                                                                                                            CC The invention describes a method of synthesising single stranded cDNA by CC a 5'-ligated adaptor-mediated process involving: annealing a cDNA CC synthesis primer to RNA, separating the cDNA strand from the RNA, CC purifying the cDNA, contacting the cDNA with an adaptor, ligating the cDNA primer to RNA, separating the cDNA with an adaptor to single CC adaptor through 5'-phosphate on strand [II] of the adaptor to single CC stranded using DNA ligase, and amplifying the obtained ligated single CC useful for: synthesising a single stranded cDNA by a 5'-ligated adaptor CC mediated process, where the source of nucleic acid is chosen from blood, CC serum, plasma, cerebrospinal fluid, urine, tissue samples, biopsies and CC serum, plasma, cerebrospinal fluid, urine, tissue samples, biopsies and CC saliva. The tissue sample comprises a cell population which may be single CC cell, 100-100000 cells or more as desired; making a CDNA library from a CC collection of mRNA molecules in a sample, where the method is applied to CDNA synthesis primers to several mRNAs by annealing one or more CC colla synthesis primers to several mRNAs in the sample; producing a double contact of the make samples and the sample collaboration.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        និនិនិនិនិនិនិនិនិ
   The invention describes a method of synthesising single stranded cDNA by CC a 5'-ligated adaptor-mediated process involving: annealing a cDNA CC synthesis primer to RNA, separating the cDNA strand from the RNA, CC puritying the cDNA, contacting the cDNA strand from the RNA, CC puritying the cDNA, contacting the cDNA with an adaptor the single contacting the cDNA with an adaptor to single contacting the cDNA with an adaptor to single contacting the cDNA with an adaptor to single contacted the single procedure. The method is stranded fragment in an molecular amplification procedure. The method is cuseful for: synthesising a single stranded cDNA by a 5'-ligated adaptor-cc mediated process, where the source of nucleic acid is chosen from blood, contacting plasma, cerebrospinal fluid, urine, tissue samples, blopsies and collection of mRNA molecules in a sample (where the method is applied to collection of mRNA molecules in a sample, where the method is applied to complify the cDNAs corresponding to the mRNAs by annealing one or more collaboration by primers to several mRNAs in the sample; producing a contaction behavior advantage.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

The method is an improved method for producing amplified heterogeneous populations of cDNA from limited quantities of RNA or oth nucleic acid. This sequence represents a poly-A-tail used to in the production single stranded cDNA.
                                                                                                                                                                                                                                                                                                                                                                             Synthesizing single stranded cDNA, involves annealing cDNA synthesis primer to RNA and synthesizing first cDNA strand, ligating adaptor to single stranded cDNA using DNA ligase, and amplifying ligated single
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Single stranded

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CC stranded cDNA collection from a first mRNA population by the method, CC where primer 1 is modified by biotin in the 5' end, isolating the biotin-CC containing single stranded cDNA (sense) by use of streptavidin coated CC magnetic beads, synthesising a double-stranded cDNA collection from a CC second mRNA population according to the method, isolating the non-biotin-CC containing single stranded cDNA (anti-sense) by use of streptavidin CC coated magnetic beads, hybridising the sense to the anti-sense cDNA, CC where an unhybridised sub-population of the anti-sense cDNA by use of streptavidin coated cDNA, and generating a second double-stranded cDNA CC isolating the unhybridised sub-population of the antisense cDNA by use of collection from the unhybridised sub-population by PCR using primer 1 and population. The method is an improved method for producing amplified CC population. The method is an improved method for producing amplified CC nucleic acid. This sequence represents the complement of a poly-A-tail used to in the production single stranded cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
```

The present invention describes a method for constructing a synthetic polynucleotide from which a polypeptide is producible to confer a selected phenotype to an organism of interest or part in a different quality than that conferred by a parent polynucleotide that encodes the same polypeptide. The method comprises: (a) selecting a first codon of the parent polynucleotide for replacement with a synonymous codon, where the synonymous codon is selected on the basis that it exhibits a different phenotypic preference than the first codon in a comparison of phenotypic preferences in test organisms or parts, where the test

selected from organisms of the

parts, where the same species as (

organism

Constructing synthetic polynucleotide for modulating the quality of a selected phenotype displayed by an organism comprises replacing a first codon with a synonymous codon to construct the synthetic polynucleotide

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                CC encodes a reporter protein, which produces, or is predicted to produce a cc selected phenotype or a phenotype of the same class as the selected phenotype in the organism or part; (5) a method of modulating the quality of a selected phenotype that is displayed by an organism of interest or cc part and that results from the expression of a parent polynucleotide that cc encodes the polypeptide; (6) a method of enhancing the quality of a cc selected phenotype that is displayed by an organism of interest or part cc and that results from the expression of a parent polynucleotide that cc encodes the polypeptide; and (7) a method of reducing the quality of a cc selected phenotype that is displayed by an organism of interest or part cc and that results from the expression of a parent polynucleotide that cc selected phenotype that is displayed by an organism of interest or part cc a selected phenotype to an organism of interest or part in a different cc and expression of a parent polynucleotide that cc encodes the polypeptide. The method is useful for constructing a cc synthetic polynucleotide from which a polypeptide is producible to confer cc as selected phenotype to an organism of interest or part in a different cc same polypeptide. It is useful for modulating the quality of a selected cc same polypeptide. It is useful for modulating the quality of a selected phenotype displayed by an organism or part. The present sequence encodes is synthetic leader sequence, which is used in an example from the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              the parent polynuclectide for replacement with a synonymous codon, where the synonymous codon is selected on the basis that it exhibits a codifferent phenotypic preference than the first codon in a comparison of different phenotypic preference than the first codon in a comparison of companism are selected from organisms or parts, where the test coganism are selected from organisms or parts, where the organism codon in the organism of interest; codon interest and organisms that are related to the organisms of interest; cand (b) replacing the first codon with the synonymous codon to construct the synthetic polynuclectide. Also described: (1) a method for construct the synthetic polynuclectide polynucleotide constructed from the method above; (3) an organism or interest or part containing a synthetic construct that comprises a regulatory polynucleotide operably linked to a tandem repeat configuration fused in frame with a reporter polynucleotide that
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Matches 16;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention describes a method for constructing a synthetic polynuclectide from which a polypeptide is producible to confer a selected phenotype to an organism of interest or part in a different quality than that conferred by a parent polynuclectide that encodes the same polypeptide. The method comprises: (a) selecting a first codon of

CC the parent polypeptide. The method comprises in a synonymous codon, where CC the synonymous codon is selected on the basis that it exhibits a different phenotypic preference than the first codon in a comparison of CC organism are selected from organisms of the same species as the organism CC organism are selected from organisms of the same species as the organism CC of interest and organisms that are related to the organisms of interest; CC and (b) replacing the first codon with the synonymous codon to construct the synthetic polynucleotide. Also described: (1) a method for CC the method above; (3) an organism or interest or its parts; (2) a synthetic polynucleotide constructed from the method above; (3) an organism or interest or part containing a CC synthetic polynucleotide constructed from the method above; (4) an organism or interest or part containing a pynthetic polynucleotide constructed from the method above; (4) an organism or interest or part containing a synthetic polynucleotide that CC comprises a regulatory polynucleotide operably linked to a tandem repeat CC synthetic polynucleotide in frame with a reporter polynucleotide that CC comprises a reporter protein, which produces, or is predicted to produce a selected phenotype or a phenotype of the same class as the selected or selected phenotype that is displayed by an organism of interest or part containing the quality of a selected phenotype that is displayed by an organism of interest or part CC and that results from the expression of a parent polynucleotide that CC encodes the polypeptide. The method of enhancing the quality of a selected phenotype that is displayed by an organism of interest or part CC and that results from the expression of a parent polynucleotide that CC encodes the polypeptide. The method is useful for constructing a selected phenotype to an organism of interest or part in a different CC same polypeptide. It is useful for modulating the quality of a selected phenotype to a construction of a parent polynucleotide that conser

CC phenotypic preferences in test organisms or parts, where the test
CC organism are selected from organisms or parts, where the test
CC and (b) replacing the first codon with the synonymous codon to construct
CC the synthetic polynucleotide. Also described: (1) a method for
CC determining the phenotypic preference of a first codon in an organism of
CC the method above; (3) an organism or interest or constructed from
CC the method above; (3) an organism or interest or part containing a
CC synthetic polynucleotide constructed from the method above; (4) an
CC organism or interest or part containing a synthetic construct that
CC of a first codon fused in frame with a reporter polynucleotide that
CC of a first codon fused in frame with a reporter polynucleotide that
CC of a selected phenotype or a phenotype of the same class as the selected
CC part and that results from the expression of a parent polynucleotide that
CC of a selected phenotype that is displayed by an organism of interest or
CC part and that results from the expression of a parent polynucleotide that
CC encodes the polypeptide; (6) a method of medulating the quality of a
CC selected phenotype that is displayed by an organism of interest or
CC and that results from the expression of a parent polynucleotide that
CC encodes the polypeptide; and (7) a method of reducing the quality of a
CC selected phenotype that is displayed by an organism of interest or part
CC and that results from the expression of a parent polynucleotide that
CC encodes the polypeptide; and (7) a method of reducing the quality of a
CC synthetic polynucleotide from which a polypeptide is producible to confer
CC and that conferred by a parent polynucleotide that
CC encodes the polypeptide. The method is useful for constructing a
CC synthetic polynucleotide from which a polynucleotide that encodes the
CC synthetic polynucleotide from which a polynucleotide is a selected
CC and that centered by a porent polynucleotide that encodes the
CC and phenotype to an organism of interest or part 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                polynucleotide from which a polypeptide is producible to confer a selected phenotype to an organism of interest or part in a different quality than that conferred by a parent polynucleotide that encodes the same polypeptide. The method comprises: (a) selecting a first codon of the parent polynucleotide for replacement with a synonymous codon, where the synonymous codon is selected on the basis that it exhibits a different phenotypic preference than the first codon in a comparison of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Constructing synthetic polynucleotide for modulating the quality of a selected phenotype displayed by an organism comprises replacing a first codon with a synonymous codon to construct the synthetic polynucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    10-NOV-2003; 2003WO-AU001487.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Synthetic leader sequence encoding DNA SEQ ID NO:5

CC sel organism or interest or part containing a synthetic construct that comprises a regulatory polynucleotide operably linked to a trandem repeat of a first codon fused in frame with a reporter polynucleotide that encodes a reporter protein, which produces, or is predicted to produce a selected phenotype or a phenotype of the same class as the selected phenotype or a phenotype of the same class as the selected phenotype that is displayed by an organism of interest or part and that results from the expression of a parent polynucleotide that encodes the polypeptide; (6) a method of enhancing the quality of a selected phenotype that is displayed by an organism of interest or part and that results from the expression of a parent polynucleotide that encodes the polypeptide; (6) a method of enhancing the quality of a selected phenotype that is displayed by an organism of interest or part and that results from the expression of a parent polynucleotide that selected phenotype that is displayed by an organism of interest or part and that results from the expression of a parent polynucleotide that selected phenotype that is displayed by an organism of interest or part and that results from the expression of a parent polynucleotide that the parent polynucleotide for replacement with a synonymous codon, where the synonymous codon is selected on the basis that it exhibits a different phenotypic preference than the first codon in a comparison of phenotypic preferences in test organisms or parts, where the test organism are selected from organisms of the same species as the organism of interest and organisms that are related to the organisms of interest; and (b) replacing the first codon with the synonymous codon to construct the synthetic polynucleotide. Also described: (1) a method for determining the phenotypic preference of a first codon in an organism of interest or its parts; (2) a synthetic polynucleotide constructed from the method above; (3) an organism or interest or part containing a synthetic polynucleotide constructed from the method above; (4) an The present invention describes a method for constructing a synthetic polynuclectide from which a polypeptide is producible to confer a selected phenotype to an organism of interest or part in a different quality than that conferred by a parent polynucleotide that encodes the same polypeptide. The method comprises: (a) selecting a first codon of the polynucleotide that codon of the polypeptide.

encodes the polypeptide. The method is useful for constructing a synthetic polypucleotide from which a polypeptide is producible to confer a selected phenotype to an organism of interest or part in a different quality than that conferred by a parent polynucleotide that encodes the same polypeptide. It is useful for modulating the quality of a selected phenotype displayed by an organism or part. The present sequence encodes a synthetic leader sequence, which is used in an example from the present

CC diffe The present invention describes a method for constructing a synthetic CC polynucleotide from which a polypeptide is producible to confer a selected phenotype to an organism of interest or part in a different CC quality than that conferred by a parent polynucleotide that encodes the same polypeptide. The method comprises: (a) selecting a first codon of the parent polynucleotide for replacement with a synonymous codon, where the synonymous codon is selected on the basis that it exhibits a code of the parent polynucleotide for replacement with a synonymous codon, where the synonymous codon is selected on the basis that it exhibits a comparison of construction of comparison of comparison of comparison of comparison of comparison of interest and organisms that are related to the organisms of interest; (and (b) replacing the first codon with the synonymous codon to construct the synthetic polynucleotide. Also described: (1) a method for construct the method above; (3) an organism or interest or part containing a synthetic polynucleotide constructed from the method above; (1) an organism or interest or part containing a synthetic polynucleotide constructed from the method above; (4) an

```
CC comprises a regulatory polynucleotide operably linked to a tandem repeat CC of a first codon fused in frame with a reporter polynucleotide that CC encodes a reporter protein, which produces, or is predicted to produce a CC selected phenotype or a phenotype of the same class as the selected CC phenotype in the organism or part; (5) a method of modulating the quality of a selected phenotype that is displayed by an organism of interest or CC encodes the polypeptide; (6) a method of enhancing the quality of a CC selected phenotype that is displayed by an organism of interest or CC encodes the polypeptide; (6) a method of enhancing the quality of a CC selected phenotype that is displayed by an organism of interest or part CC encodes the polypeptide; and (7) a method of reducing the quality of a CC selected phenotype that is displayed by an organism of interest or part CC and that results from the expression of a parent polynucleotide that CC encodes the polypeptide. The method is useful for constructing a cC synthetic polynucleotide from which a polypeptide to a part in a different CC same polypeptide. It is useful for modulating the quality of a selected phenotype to an organism of interest or part in a different CC same polypeptide. It is useful for modulating the quality of a selected phenotype displayed by an organism or part. The present sequence encodes the interest or part in a different CC as synthetic leader sequence, which is used in an example from the present in a condess the polypeptide. It is useful for modulating the quality of a selected phenotype displayed by an organism or part. The present sequence encodes in the interest or part in a different in the present sequence encodes in the present sequence encodes in the interest or part.

The extraction composition comprises a protease enzyme and does not contain a surface active agent. The protease enzyme is a subtilisin-like serine protease, which is proteinase K. The method is useful for extracting nucleic acids from a tissue sample, e.g. a mammalian tissue comprising mouse tail tissue or mouse ear tissue, or a plant tissue comprising a leaf or a seed. The protease enzyme causes partial tissue breakdown such that nucleic acids are released. This sequence represents a PCR primer used to amplify Arabidopsis DNA, used in the method of the invention.
The invention relates to a class of CpG immunostimulatory oligonucleotides containing a 5'TCG motif or a CG at or the 5' end that are useful for stimulating an immune response. Oligonucleotides and compositions of the invention are useful for treating allergy or asthma, viral and bacterial infections and cancer e.g. biliary tract cancer, breast cancer, cervical cancer, choriocarcinoma, colon cancer,
                                                                                                                                                                                                                                                                                           New oligonucleotides, useful for treating allergy or bacterial infections, and cancer, e.g. biliary tract

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This oligomer contains an inverted polarity region formed from an oxyloso dimer synthon. Residues 13 and 14 are linked via an oxyloso grow (i.e. nuclectides that have xylose sugar linked via the oxylene ring). The sequence is designed to target the Human interleukin-1 beta gene beginning at nuclectide 7378 and will covalently cross-link to it via the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New sequence-specific non-photo-activated crosslinking agents - bind the major groove of duplex DNA and are esp. useful for treating latent infections e.g. HIV.

                                                                                                                                     The synthetic oligomer is capable of forming a triplex at physiological CC pH with a purine rich target sequence by coupling into the major groove of the duplex. The specific target sequence of this oligomer is the human cC interleukin -1 beta gene beginning at nucleotide 7378 contg. a purine CC rich sequence concd. on one strand of the duplex. The oligomer, and cothers like it are useful in diagnosis and therapy of diseases CC characterised by specific DNA duplex targets, e.g. HPV; HBR; HIV, CC hepatitis B, herpes, malignant tumours and inflammation. The triple CC helices form under mild conditions thus assays may be carried out without CC subjecting the test specimen to harsh conditions. The oligomer contains an inverted polarity region formed from an o-xyloso dimer synthon. The CC linking gp. is o-xyloso (nucleotides have the 3' positions of xylose CC sugars linked via the o-xylene ring). Two nucleotides are coupled through CC may render the oligomer stable to nuclease activity. The oligomer is able to inhibit gene expression, as verified by in vitro systems. See also CC field 1925-25501 and AAQ30226-448. (Updated on 25-MAR-2003 to correct PN

The synthetic oligomer is capable of forming a triplex at physiological CC pH with a purine rich target sequence by coupling into the major groove of the duplex. The specific target sequence of this oligomer is the human CC interleukin -1 beta gene beginning at nucleotide 7378 contg. a purine CC rich sequence concd. on one strand of the duplex. The oligomer, and CC others like it are useful in diagnosis and therapy of diseases CC characterised by specific DNA duplex targets, e.g. HPV; HER; HIV, CC helices form under mild conditions thus assays may be carried out without CC subjecting the test specimen to harsh conditions. The oligomer contains CC an inverted polarity region formed from an o-xyloso dimer synthon. The CC linking gp. is o-xyloso (nucleotides have the 3 positions of xylose CC usyless linked via the o-xylene ring). Two nucleotides are coupled through CC axylene residue to form the dimer synthon. This additional modifications CC may render the oligomer stable to nuclease activity. The oligomer is able to inhibit gene expression, as verified by in vitro systems. See also CC field 12.25501 and AAQ30226-448. (Updated on 25-MAR-2003 to correct PN

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         A method for the analysis of cDNA comprises (a) preparing an aggregate double-stranded cDNAs by using an aggregate of mRNAs and a plural type labelled reverse transcription primers (GENESEQ files AQ75547-075798) and using the aggregate of mRNAs as the template for each reverse transcription primer; (b) digesting each of the prepared aggregates of the double-stranded cDNAs with restriction enzyme and; (c) electrophoresing the digested aggregate of cDNAs in seperate lanes. The method can be used to analyse gene expression rapidly and easily

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A method for the analysis of cDNA comprises (a) preparing an aggregate of double-stranded cDNAs by using an aggregate of mRNAs and a plural type (labelled reverse transcription primers (GENESEQ files AAO75547-Q75798) and using the aggregate of mRNAs as the template for each reverse transcription primer; (b) digesting each of the prepared aggregates of the double-stranded cDNAs with restriction enzyme and; (c) electrophoresing the digested aggregate of cDNAs in seperate lanes. The method can be used to analyse gene expression rapidly and easily
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Synthetic.

                                              The sequences given in ANT10742-67 are synthetic oligonucleotides which are used in the construction of the electronically self- addressable device (ED) of the invention. The ED comprises a substrate, an electrode or opt. a number of electrodes supported by the substrate, a current source operatively connected to the electrode and an attachment layer adjacent to the electrode which is permeable to a counterion but not permeable to a molecule capable of insulating or binding to the electrode. The attachment layer is capable of attaching a macromolecule. The ED is used for genetic typing and comprises a number of electronically addressable locations each comprising an electrode, and a binding entity, such as one of these probes, attached to each of the locations capable of detecting the presence of a genetic sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   and using the aggregate of mRNAs as the template for each reverse transcription primer; (b) digesting each of the prepared aggregates the double-stranded cDNAs with restriction enzyme and; (c) electrophoresing the digested aggregate of cDNAs in seperate lanes. method can be used to analyse gene expression rapidly and easily
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Electronically self-addressable device -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          WPI; 1996-097582/10.
